

AVHD3 High-Definition High-Density Cabling

There Just Isn't Enough Time!

Wireworks AVHD3 High-Definition/High-Density Interconnect System can save you such a lot of time and aggravation, that you will immediately remember that "TIME IS MONEY".

AVHD3 is the most effective way to reduce the man-hours needed by engineers and roadies alike to connect high numbers of coax cables. Just think about this – you have 240 coax cables to connect between two parts of your system, checking against a diagram or marker. How long does that take?

Hours!

And think of the possibility of making a mistake - then the time it takes to correct it! With Wireworks AVHD3, this job will take less than 10 minutes – and you can be sure there are no errors! That's a real time-saver.

High Definition and High Density

By using high-integrity, miniature coax contacts in road-tested, extremely durable, multi-contact connectors, all your high-definition coax signal cables are connected or disconnected fast and simply. 24 precision coax contacts are safely housed in heavy duty connectors and the whole assembly is supplied complete with the tails necessary

to connect directly to the equipment in the rack. Integrating AVHD3 into your system is fast too. It's the easiest drop-in solution available. By using Wireworks unique AVHD3 rack assemblies and custom configured Link cables, high concentrations of BNC and similar discrete connectors become a thing of the past. Your whole system is up and running in no time.

Lots of Audio?

AVHD3 isn't just the solution for your coax cabling. Multiple balanced audio connections are handled in the same convenient way! 230 balanced audio connections can be installed on just one 3 unit rack panel! That certainly beats a whole mess of XLR connectors! And just like the coax cabling, the 16 gauge audio contacts in the AVHD3 multi-connectors are supplied ready terminated with audio cable to plug into the equipment in your rack.

Get Mixed Up

With Wireworks AVHD3 High-Definition/High-Density Interconnect System, coax and audio cabling can be integrated into a single system. Just let us know how much of which signals are needed and we will supply you with the complete system, ready to use. At last, your cabling can be simple! Now you can relax. You'll love it!

AVHD3 High-Definition High-Density Cabling

Features Overview

- Up to 240 coaxial connections in just 3 rack spaces.
- Up to 230 balanced audio connections in just 3 rack spaces.
- 72 coaxial connections in just 1 rack space.
- Other configurations, including mixed video and audio systems to your requirements.
- The fastest connections available.
- Simple and accurate connections.
- Highest connector density available.
- AVHD3 PictureLink can be configured exactly for your system. No compromise is necessary. More or less coaxial connections, more or less audio connections, control cables, data cables.. no problem.
- Your complete system, both video in all it's many formats, and audio - all in the smallest possible space.
- Convenient tails, terminated to your needs for easy connection directly to your equipment.
- No bulky awkward breakout boxes required. Your rack of equipment remains connected in transit.
- No further BNC interconnect cables required.
- Set up time reduced to a minimum.
- Gold contacts for best connectivity.
- Cast metal connector frames and backshells for added durability.
- High-grip strain relief and cable clamping.
- Choice of secure latching systems.
- Huge reduction in interconnect cables for any system
- Wireworks Lifetime Warranty
